SUMMARY

Automation Engineer and co-founder of Antic. I design and operate systems that replace repetitive customer-communication work: scheduling, reminders and 24/7 support over WhatsApp and voice. I work with agencies that need to deliver automation without an in-house technical team, and with SMBs losing leads to slow response times, on self-hosted n8n infrastructure with LLMs integrated via API.

EXPERIENCE

Co-founder & Automation Engineer

Antic | Tandil, Argentina (remote) | 2025 - Present

- Co-founded an AI automation consultancy serving marketing agencies and SMBs, defining the technical offering and delivering implementations end to end.
- Build conversational agents over WhatsApp and voice that handle scheduling, reminders and 24/7 support, integrating n8n, Claude API, OpenAI, Vapi.ai and Twilio.
- Design multi-tenant architectures on Supabase that serve several businesses from a single instance, isolating data and configuration per client.

Freelance Automation Engineer

Self-employed | Tandil, Argentina | 2024 - Present

- Operate a self-hosted n8n instance on a VPS (Contabo, Docker Compose, Caddy with SSL) after migrating off Railway, eliminating the recurring outages that interrupted production workflows.
- Built a B2B outbound system of 5 chained n8n workflows with a Telegram bot for state management, automated lead enrichment, Claude API-assisted drafting and a quality gate before send.
- Eliminated manual phone follow-up on overdue memberships at a 100-member gym by automating WhatsApp payment-due alerts from the admin dashboard.

SYSTEMS IN PRODUCTION

RecepiA — WhatsApp appointment agent recepia.lat

n8n · Claude API · Twilio · Supabase. Manages clinic appointment scheduling over WhatsApp, with conversation memory persisted in PostgreSQL and a multi-tenant architecture.

Gym CENIT — Access control & automated alerts gym-cenit.vercel.app

React · Supabase · WhatsApp. RFID badge check-in, admin dashboard with membership status and automated payment-due alerts. Live, serving 100 members.

B2B outbound system

n8n · Telegram Bot API · Claude API · Google Sheets. Five chained workflows: capture, enrichment, assisted drafting, quality control and state tracking.

TECHNICAL SKILLS

Automation: n8n (self-hosted and cloud), workflow automation, RPA, process orchestration, error handling and retries

Applied AI: Anthropic Claude API, OpenAI API, Vapi.ai, voice AI, LLM integration, prompt engineering, conversational agents

Messaging & integrations: WhatsApp Business API, Twilio, Telegram Bot API, Meta Cloud API, REST APIs, webhooks, Google Sheets API, MercadoPago, OAuth

Data & backend: PostgreSQL, Supabase, Node.js, JavaScript, TypeScript, Python, SQL, serverless

Infrastructure: Docker, Docker Compose, VPS (Contabo), Easypanel, Caddy, SSL, Git, GitHub, Vercel

EDUCATION

Associate Degree in Software Application Development

Universidad Nacional del Centro (UNICEN), Argentina | 2023 - 2026 (in progress)

Data Analytics Fundamentals Guayerd - IBM SkillsBuild | 2024 - 2025

Languages: Spanish (native) | English (B2-C1) **Awards:** 2nd place, Ecoemprende
