SUMMARY

Full Stack Developer with 2 years shipping web and mobile applications to production using React, Node.js, Angular, Flutter and PostgreSQL/Supabase. Proven experience with e-commerce and payment gateways, admin dashboards, PWAs, and deployment on Vercel and self-managed VPS. Co-founder of Antic, an AI automation consultancy.

EXPERIENCE

Co-founder & Developer

Antic | Tandil, Argentina (remote) | 2025 - Present

- Co-founded an AI automation consultancy serving agencies and SMBs, building conversational agents over WhatsApp and voice with n8n, Claude API, OpenAI, Vapi.ai and Twilio.

Freelance Full Stack Developer

Self-employed | Tandil, Argentina | 2024 - Present

- Shipped 5 web applications to production for clients in retail, fitness, sports and healthcare, owning frontend, backend, database and deployment.
- Enabled online sales for a clothing brand that previously sold only through Instagram, building an e-commerce platform with catalog, cart and production-approved MercadoPago checkout.
- Unblocked a launch stalled by the carrier's minimum shipment volume, replacing the Andreani API integration with a custom postal-zone shipping rate engine.
- Replaced a 100-member gym's spreadsheet-based sign-in with an RFID access control system built in React and Supabase, including an admin dashboard for membership status.
- Contained infrastructure cost by compressing product images client-side before upload, cutting Supabase egress without degrading catalog quality.

PROJECTS

Viajemos — Ride-sharing app

Flutter, Dart, Supabase. Built at Antic. Connects students and commuters traveling the same route to share rides and split costs, reducing cars on the road. 2nd place at Ecoemprende, a sustainable-venture competition.

Sagrada — Clothing e-commerce sagradavestidos.com

React, Node.js, MercadoPago API, Supabase. Product catalog, cart, production-approved checkout and automatic postal-zone shipping calculation.

Gym CENIT — Membership management system gym-cenit.vercel.app

React, Supabase, PostgreSQL. RFID access control, admin dashboard with membership status and automated payment-due alerts. Live, serving 100 members.

TECHNICAL SKILLS

Frontend & mobile: React, Angular, Flutter (Dart), JavaScript (ES6+), TypeScript, HTML5, CSS3, PWA, responsive design, Figma

Backend: Node.js, REST APIs, webhooks, serverless architecture, MVC, Java (OOP), Python, PHP

Databases: PostgreSQL, Supabase, relational modeling, SQL, PL/pgSQL triggers

Integrations: MercadoPago, WhatsApp Business API, Twilio, n8n, Anthropic Claude API, third-party APIs

DevOps: Git, GitHub, Docker, Vercel, VPS, production deployment
